

Problem Statement No.4: College Admission Agent

The Challenge

An AI-driven **College Admission Agent**, powered by **RAG (Retrieval-Augmented Generation)**, designed to streamline and automate the student admission process. Navigating institutional repositories manually can be complex and time-consuming for prospective students. This intelligent assistant addresses that friction by directly retrieving and summarizing crucial admission policies, eligibility criteria, and frequently asked questions (FAQs) from verified institutional databases and official sources.

"Prospective students can ask natural language questions and receive accurate, up-to-date responses instantly."

Core Capabilities & Scope

The agent dynamically supports prospective applicants by providing insights into:

- **Course Selection:** Guidance on available programs, pathways, and specializations based on student interests.
- **Application Guidance:** Step-by-step walkthroughs of the submission pipeline and documentary requirements.
- **Fee Structure:** Clear breakdown of tuition, processing fees, and financial obligations.
- **Important Deadlines:** Real-time tracking and notification of critical timelines to ensure compliance.

Expected Impact

By leveraging trusted, real-time data, the agent significantly reduces manual administrative inquiries, optimizes overhead for academic staff, and enhances the overall applicant experience. This architectural approach boosts transparency, accessibility, and operational efficiency across the college admissions lifecycle.

MANDATORY TECHNOLOGY STACK

Use of IBM Cloud Lite Services / IBM Granite LLM is mandatory.
